

REMARKS

The present amendment amends the specification, abstract and claims to correct a minor informality with respect to the use of the terms "queuing" and "cueing". More specifically, as described in the Summary of the Invention section of the present application, a feature of the invention relates to the location of a section or arrangement for holding processed film to be scanned. As further described on page 2 of the present specification, due to this feature, multiple films can be dried and collected while waiting to be scanned.

The feature of collecting film while waiting to be scanned is consistent with definition of the term "queuing" which is the subject matter of the present amendment. More specifically, in the original application the term "cueing" was inadvertently utilized instead of "queuing". The term "queuing" more clearly describes the invention and is consistent with the description in the present invention as noted above and the definition of the term queuing. Reference is further made to page 22, line 14 of the specification which describes that once film is inserted to a casing 71d, plate member 7000 can be rotated to place film holding casing 71d in a section 6010 so as to wait to be supplied to a scanner. Also, page 23 of the specification describes that a casing can be held for scanning, rather than waiting for the film scanner to complete the scanning of film which may be in the scanner.

Therefore, in the present amendment, all occurrences of "cue", "cueing" or "cued" have been changed to "queue", "queued" or "queuing". The use of the word queuing in accordance with the present amendment is consistent with the description in the present application, as well as the definition of queuing. Therefore, the present amendment does not raise new issues for consideration and entry is respectfully requested.

Respectfully submitted,

David A. Novais
Attorney for Applicant(s)
